

### Something From Nothing Is Something

Bridge shelves let you create shelves between stacks of cabinets and give you the freedom of floating cabinets or counter tops. Bridges create shelves that are sturdy, strong, and good looking. They can also be used to float storage cabinets above all, for a very useful and very impressive configuration.

Bridges hang between cabinets, or stacks of cabinets, that are at a common height. No assembly or tools are required.

Bridges can also support counter tops. Here a bridge shelf is used to float a double length mica top. The empty space it creates produces a very efficient desk.

Bridge Shelves come with "Wing" brackets that overlap the supporting cabinets.

Simply position the winged bridge shelf onto the cabinets. Feel free to stack cabinets above the wings.

### SPECIFICATIONS

Weight: 13 lbs  
 Bridge Dimension: 37.75" W x 1" H x 20" D  
 Weight Capacity: 80 lbs  
 Construction: 18 & 22 ga cold rolled steel
