

Stereo, Computer or Display Cabinet

This versatile pullout cabinet is just the right size for so many applications.

It can be configured with pullout shelves or stationary shelves - to hold as many as eight AV components. Load it with mini drawers, for cassette storage or a collectable display.

This cabinet is available with or without a flip door.

Sized like our three drawer cabinet (MC3D20) the CAB20 is the perfect cabinet to add to any configuration. Speaking of drawers, this cabinet will hold up to six mini drawers. FDCAB20 is ideal to keep sensitive AV, stereo or computer equipment dust free and out of sight. An optional lock for the flip door is available.

And don't forget about your new Media Center PC - CAB20 lets you place that computer in almost any configuration - and you can lock it for peace of mind. CAB20 is equipped with a series of slats that accept our optional pullout and stationary shelves as well as mini drawers. Place shelves, keyboard stations or mini drawers, right where you need them. The rear wiring cutout keeps you connected.

Sliders snap onto slats. Shelves and drawers snap onto the sliders.
