

Speaker Enclosures

Our Speaker Box features a 'grille' style front panel, allowing you to integrate your speakers into a complete Home Theater configuration without them looking out of place. The back is open, so simply slide the speaker inside and you're ready to rock. They also feature adjustable levelers so they can line up with cabinets.

Speaker enclosures are sold individually so you can get what you need. If you have speaker stands for your main speakers you might want a speaker enclosure for your sub woofer. Put it between two narrow cabinets and use a TOP56 for your TV stand.

Speaker Enclosures Team up with Narrow Cabinets for an Academy Performance

Combine two narrow cabinets with three speaker boxes and you have the ultimate Home Theater set up, with space for A/V equipment, DVDs and CDs.

It also positions your left, right and center speakers where you want them. And best of all, it's exactly the width to put a double length top over the whole configuration.

A 'grille' style front panel means you get all the sound, but your speakers are out of sight and fully integrated into your overall Home Theater configuration.

FEATURES:

- Adjustable Levelers to line up speaker enclosures with cabinets
- Color matched and sized like 20.5" high cabinets for seamless integration

Go Configure with Narrow Cabinets and Speaker Enclosure Combinations

You can also Go Configure your configuration online (www.Can-Am.ca/go_configure.htm) using our Flash Drag & Drop configuration tool. You'll find some pre-configured sample home theater base configurations on the bottom of the drop-down menu. They include three speaker boxes, two narrow cabinets and a double length top.
